INFORMATION TECHNOLOGY: PAPER I

MARKING GUIDELINES

Time: 3 hours 150 marks

These marking guidelines are prepared for use by examiners and sub-examiners, all of whom are required to attend a standardisation meeting to ensure that the guidelines are consistently interpreted and applied in the marking of candidates' scripts.

The IEB will not enter into any discussions or correspondence about any marking guidelines. It is acknowledged that there may be different views about some matters of emphasis or detail in the guidelines. It is also recognised that, without the benefit of attendance at a standardisation meeting, there may be different interpretations of the application of the marking guidelines.

SECTION A SQL

QUESTION 1.1 [4]

```
SELECT *
FROM tblCaptains
WHERE CombatTraining = TRUE
ORDER BY DateHired DESC
```

QUESTION 1.2 [4]

```
SELECT *
FROM tblSpaceships
WHERE (Model LIKE 'M*' OR Model LIKE 'T*') AND FuelConsumption <
500
```

Accept % for MySQL/JavaDB

QUESTION 1.3 [5]

```
SELECT *
FROM tblCaptains
WHERE YEAR(NOW()) - YEAR(DateHired) >= 10
```

JAVADB

```
SELECT *
FROM tblCaptains
WHERE YEAR(CURRENT_DATE) - YEAR(DateHired)  >= 10
```

MYSQL

```
SELECT *
FROM tblCaptains
WHERE YEAR(NOW() ) - YEAR(DateHired)  >= 10
```

QUESTION 1.4 [5]

```
SELECT Model , Speed
FROM tblSpaceShips
WHERE Speed > (SELECT AVG(Speed) FROM tblSpaceShips)
ORDER BY Speed DESC
```

QUESTION 1.5 [7]

```
SELECT YEAR(DepartureDate) AS YearOfMission, COUNT(*) AS
NumberOfMissions
FROM tblMissions
WHERE MONTH(DepartureDate) <= 6
GROUP BY YEAR(DepartureDate)
```

MySQL Alias use in GroupBy

```
SELECT YEAR(DepartureDate) AS YearOfMission, COUNT(*) AS
NumberOfMissions
FROM tblMissions
WHERE MONTH(DepartureDate) <= 6
GROUP BY YearOfMission
```

QUESTION 1.6 [9]

```
SELECT tblMissions.MissionID, tblCaptains.Fullname,
tblSpaceships.Model, tblSpaceships.Speed, tblMissions.SolarSystem,
tblMissions.Distance, Round ((Distance/Speed),2) AS TimeInYears
FROM tblMissions, tblCaptains, tblSpaceships
WHERE tblMissions.CaptainID=tblCaptains.CaptainID AND
tblMissions.SpaceshipID=tblSpaceships.SpaceshipID;
```

JAVADB

```
SELECT tblMissions.MissionID, tblCaptains.Fullname,
tblSpaceships.Model, tblSpaceships.Speed, tblMissions.SolarSystem,
tblMissions.Distance, FLOOR ( (Distance/Speed) * 100 + 0.5) / 100
AS TimeInYears
FROM tblMissions, tblCaptains, tblSpaceships
WHERE tblMissions.CaptainID=tblCaptains.CaptainID AND
tblMissions.SpaceshipID=tblSpaceships.SpaceshipID
```

MYSQL

```
SELECT tblMissions.MissionID, tblCaptains.Fullname,
tblSpaceships.Model, tblSpaceships.Speed, tblMissions.SolarSystem,
tblMissions.Distance, Round ((Distance/Speed),2) AS TimeInYears
FROM tblMissions, tblCaptains, tblSpaceships
WHERE tblMissions.CaptainID=tblCaptains.CaptainID AND
tblMissions.SpaceshipID=tblSpaceships.SpaceshipID;
```

Accept Inner Joins

QUESTION 1.7 [7]

```
UPDATE tblMissions
SET MainObjective = 'Scouting'
WHERE DepartureDate > NOW() AND RIGHT(SolarSystem,1) NOT IN
('A','B','C') AND MainObjective = 'Military Exercise'
```

JAVADB

```
UPDATE tblMissions
SET MainObjective = 'Scouting'
WHERE DepartureDate > CURRENT_DATE AND SUBSTR(SolarSystem,
length(SolarSystem)  ,  1) NOT IN ('A' , 'B' , 'C') AND
MainObjective = 'Military Exercise'
```

MYSQL

```
UPDATE tblMissions
SET MainObjective = 'Scouting'
WHERE DepartureDate > NOW() AND RIGHT(SolarSystem,1) NOT IN
('A','B','C')  AND MainObjective = 'Military Exercise'
```

QUESTION 1.8 [9]

```
INSERT INTO tblMissions (CaptainID, SpaceshipID, MainObjective,
DepartureDate, Distance, SolarSystem)
SELECT CaptainID , INT( (RND(CaptainID) * 30) + 1 ) ,
'Exploration' , #01/01/2030# , 5 , 'Alpha-Centauri'
FROM tblCaptains
WHERE CaptainID NOT IN (SELECT CaptainID FROM tblMissions)
```

MYSQL

```
INSERT INTO tblMissions ( CaptainID, SpaceshipID, MainObjective,
DepartureDate, Distance, SolarSystem )
SELECT CaptainID, FLOOR( (RAND() * 30) + 1 ), 'Exploration',
‘01/01/2030’, 5, 'Alpha-Centauri'
FROM tblCaptains
WHERE CaptainID NOT IN (SELECT CaptainID FROM tblMissions)
```

JAVADB

```
INSERT INTO tblMissions  ( CaptainID, SpaceshipID, MainObjective,
DepartureDate, Distance, SolarSystem )
SELECT CaptainID, FLOOR( (RAND(CaptainID) * 30) + 1 ) ,
'Exploration', ‘01/01/2030’ , 5, 'Alpha-Centauri'
FROM tblCaptains
WHERE CaptainID NOT IN (SELECT CaptainID FROM tblMissions)
```

SECTION B OBJECT ORIENTATED PROGRAMMING

JAVA SOLUTION

QUESTION 2 CrewMember.java

```
//Q2.1 - 4
 Class header correct
public class CrewMember {
     fields private
     typed correctly
     named correctly
    private String fullname;
    private int crewID;
    private String department;

    //Q2.2 - 2
    field declared as public
    named and assigned correctly (must be static)
    public static int numPromotedCrew=0;

    //Q2.3 - 3
     header correct
     parameters named and typed correctly
    public CrewMember(String inFN , int inCID, String inDT )
    {
         fields assigned using parameters
        fullname = inFN;
        crewID = inCID;
        department = inDT;
    }

    //Q2.4 - 3
     All getters methods named correct
     All return correct type declared
     All returning correct field
    public String getFullname() {
        return fullname;
    }

    public int getCrewID() {
        return crewID;
    }

    public String getDepartment() {
        return department;
    }
```

```
    //Q2.5 - 5
     Header correct
    public String toString()
    {
         contains all fields
         added tabbed spaces
         formatting correct
         returns string
        return fullname + "\tCrew ID: " + crewID + "\t[" +
department + "]";
    }

}
```

QUESTION 3 Officer.java

```
//Q3.1 - 2
 Class named correctly
 Extends CrewMember
public class Officer extends CrewMember
{
    //Q3.2 - 2
     private, correctly named and typed
     datePromoted uses a suitable date object
    private int rank;
    private LocalDate datePromoted;
    //Q3.3 - 2
    field declared as public
    named and assigned correctly (must be static)
    public static int numPromotedOfficers = 0;

    //Q3.4 - 4
     Constructor header correct

    public Officer(String inFN , int inCID, String inDT ,int inRK,
LocalDate inDP)
    {
         Parent contructor called
         Correct parameters given
        super(inFN, inCID, inDT);

         child class fields assigned using parameters
        rank = inRK;
        datePromoted  = inDP;
    }

    //Q3.5 - 1
     Method header correct and returning correct field

    public int getRank() {
        return rank;
    }
```

```
    //Q3.6 - 5
    Method header correct
    public String getTitle()
    {
        array of strings representing different
          titles in correct order
        String[] titleArr =
        {
            "", "Ensign", "Lieutenant", "Lt Commander",
"Commander", "Captain"
        };

        returning correct title based on rank
        return titleArr[rank];
    }

    //Q3.6 - 5
     **Alternative solution**
     **Switch can be replaced by case statement or correctly
nested if else statement.
    Header correct
    public String getTitle()
    {
        checking for title based on rank
        String title = "";
        switch(rank)
        {
            case 1:
                title = "Ensign";
                break;
            case 2:
                title = "Lieutenant";
                break;
            case 3:
                title = "Lt Commander";
                break;
            case 4:
                title = "Commander";
                break;
            case 5:
                title = "Captain";

        }
        returning correct title
        return title;
    }
```

```
    //Q3.7 - 4
     Method header correct
    public String toString()
    {
         calls toString from parent class
         appends title
         return String
        return super.toString() + " " + getTitle();
    }

    //Q3.8 - 5
    Method header correct
    public void promote()
    {

         Checking for rank less than 5
          (less than equal to 4 also acceptable)
        if (rank < 5)
        {
            increment rank
            rank = rank + 1;
            increment number of promoted officers
            numPromotedOfficers++;

           Updating the promotion date to the current date
            datePromoted = LocalDate.now();

        }

    }
}
```

QUESTION 4 & 6.1,6.2 CrewMemberManager.java

```
//Q4.1 - 1
Class header correct
public class CrewMemberManager
{
    //Q4.2 - 4
    fields private
    fields named correctly
    array of 80 CrewMembers (Type of the parent class)
    size field correct type

    private CrewMember[] cArr = new CrewMember[80];
    private int size = 0;
```

```
//Q4.3 - 11
    Constructor method header correct
    public CrewMemberManager()
    {
        try
        {
            open file
            Scanner sc = new Scanner(new File("crewmembers.txt"));

            loop through file
            while (sc.hasNextLine())
            {
                read line
                String line = sc.nextLine();

                extract first 3 fields
                String tokens[] = line.split("#");
                String fullname = tokens[0];
                int crewID = Integer.parseInt(tokens[1]);
                String department = tokens[2];

                check for an officer or a crewmember
                if (tokens.length == 3)
                {
                    creating crewmember object and add to array
                    CrewMember c = new CrewMember(fullname,
crewID, department);
                    cArr[size] = c;
                }
                else
                {

    Parent constructor called
    Correct parameters given
    Inherited Create(inFN, inCID, inDT);
    child class fields assigned using parameters
    rank := inRK;
    datePromoted := inDP;
end;

//Q3.5 - 1
Method header correct and returning correct field
function TOfficer.getRank: integer;
begin
    Result := rank;
end;

//Q3.6 - 4
Method header correct
function TOfficer.getTitle: string;
const
  array of strings representing different titles in correct
    order
   titleArr : array[1..5] of string = ('Ensign','Lieutenant','Lt
Commander','Commander','Captain');
begin
  returning correct title based on rank
  Result:= titleArr[rank];
end;

//3.6 - 4
**Alternative solution**
**Switch can be replaced by case statement or correctly nested if
else statement
Header correct
function TOfficer.getTitle: string;
var
```

```
  title : string;
begin
  checking for title based on rank
  case rank of
    1 : title:= 'Ensign';
    2 : title:= 'Lieutenant';
    3 : title:= 'Lt Commander';
    4 : title:= 'Commander';
    5 : title := 'Captain';

  end;

  returning correct title based on rank
  Result:= title;
end;
}

//Q3.7 - 4
Method header correct
function TOfficer.toString: string;
begin
    calls toString from parent class
    appends title
    return String
    Result := Inherited toString + ' ' + getTitle();
end;

//Q3.8 - 5
Method header correct
procedure TOfficer.promote();
begin
Checking for rank less than 5 (less than equal to 4 also
acceptable)
    if rank < 5 then
    begin
      increment rank
      rank := rank + 1;
      increment number of promoted officers
      Inc(numPromotedOfficers);
      Updating the promotion date to the current date
      datePromoted:=  Now;

    end;

end;

end.
```
