QUESTION 2.1

LOCI  
MECHANISM

The figure below shows a mechanism consisting of a crank **CD**, with connecting rods **BC** and **AB**. Crank **CD** and rod **BC** are joined at point **C**. **P** is a point extended on rod **BC**.

The crank **CD** rotates **clockwise** around centre **D** and rod **AB** pivots at **A** and **B** during rotation.

Use the given centre lines to construct and draw the locus of **point P** for one full rotation of the mechanism.

- The length of rod **BP** is 116.
- Draw the direction arrow.
- Show all **constructions**.

QUESTION 2.2

LOCI  
CAM

The following are given in the adjacent drawing:

- the incomplete **graph of displacement** of a **roller-ended** follower in position.
- the vertical and horizontal centre lines of the camshaft.
- the shaft and follower detail at the starting position.
- direction of turn.

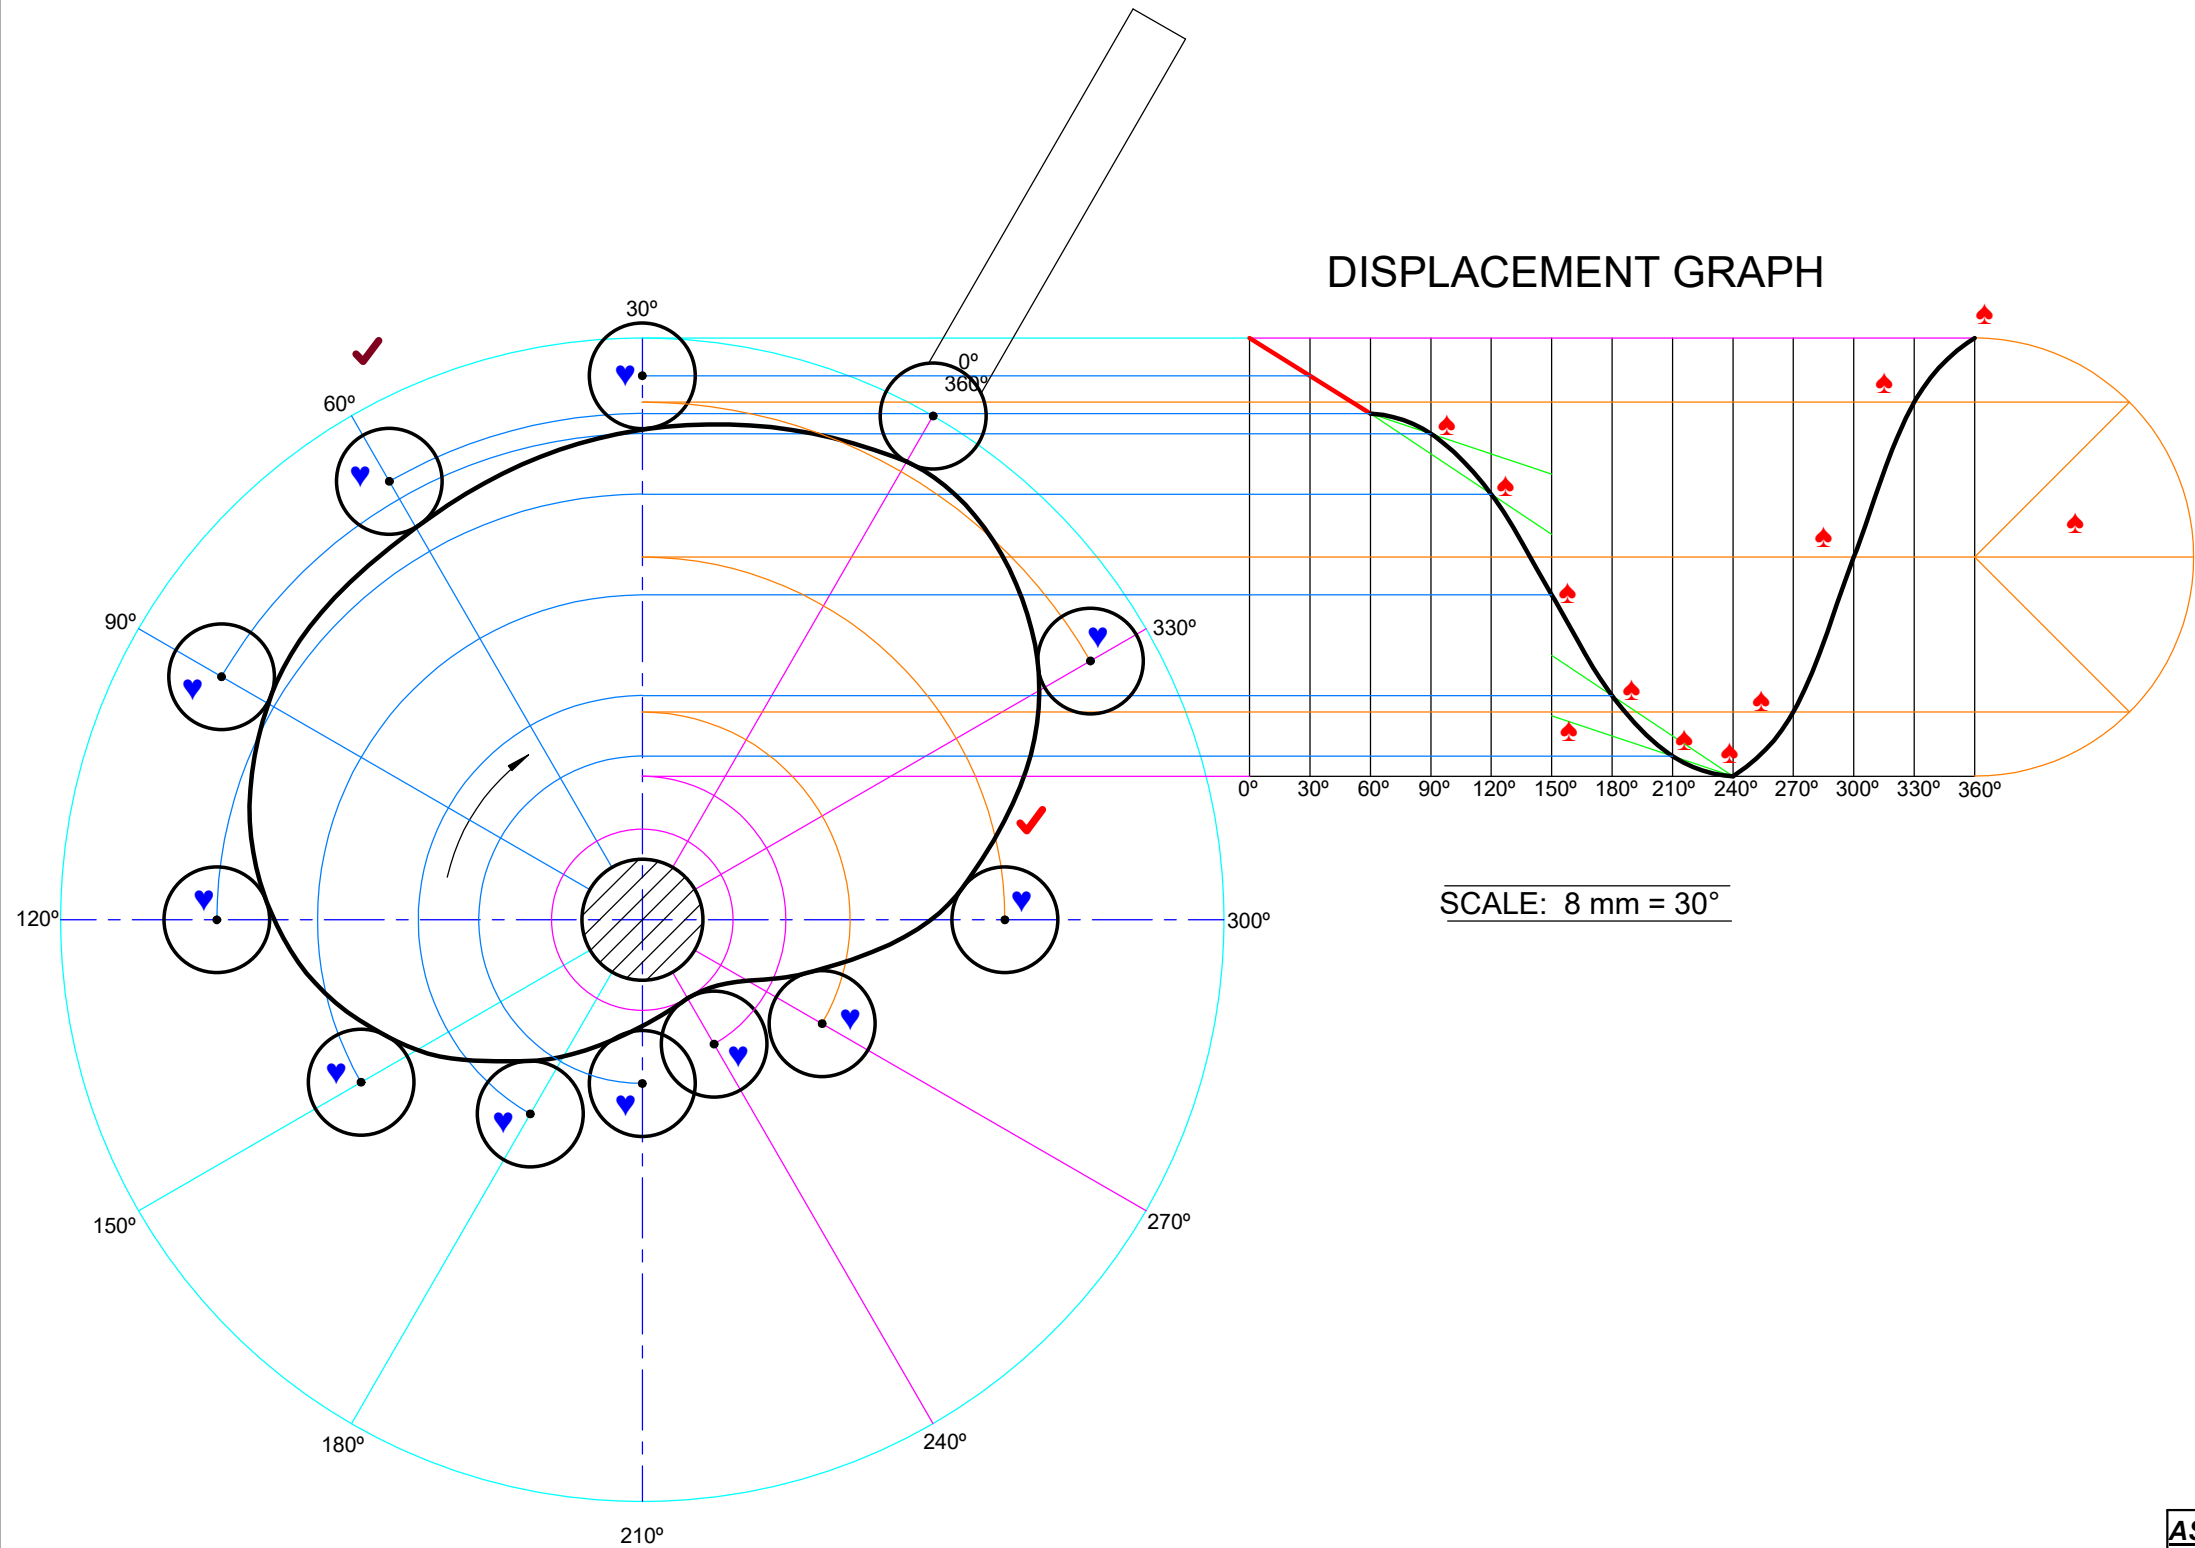

The cam imparts the following motion to the follower:

- 0° — 60° the follower **falls** 10 mm with **uniform motion**. (Given)
- 60° — 240° the follower **falls** a further 48 mm with **uniform acceleration and retardation**.
- 240° — 360° the follower **rises** 58 mm with **simple harmonic motion** back to its original position.

The roller diameter is 14 mm.

Do the following:

- 2.2.1 Draw the complete graph of displacement for the required motion.
- 2.2.2 Draw the cam profile from the displacement graph.
- 2.2.3 Show all constructions.
